INFORMATION TO AUTHORS

Contributions, written in English, French or German, and books for review may be sent either directly to the Editor, Professor K. Siegbahn, Institute of Physics, University of Uppsala, Sweden, or to one of the members of the Editorial Board. *Contributions and figures to be sent in duplicate.* Short contributions of *less than 1500 words* and not subdivided into sections, may be published as Letters to the Editor, in a shorter time than regular articles as the proofs will normally be corrected by the publisher.
Review articles, written in English, may be sent directly to the Editor.

Before mailing the manuscript, please check the following points:
1. Is there an *abstract* in English? (Letters to the Editor should have an abstract of *less than 30 words.*)
2. Have you given the name(s) of the author(s) on the manuscript and the name and address of the institute where the research work was done? (Proofs will be sent by the publisher to this address.) For the sake of correct indexing in abstracts journals etc. it is recommended that authors use full forenames rather than just initials.
3. Is the manuscript clearly typewritten, with ample space between the lines, is the subdivision logical, and are the text and figures *ready for printing*? (The costs for making corrections are very high when proofs have been made of a manuscript. It will therefore be assumed that the submitted manuscript is in final form. Authors will be charged for corrections against manuscript if the expense exceeds a certain amount.)
4. Have you enclosed inked original drawings, or (*preferably not*) glossy prints of every figure, ready for direct reproduction? Are all details, especially the lettering and numbering, sufficiently large to show up clearly in the reduced size of the printed figure? (The consequence of making the slightest changes in the figures of the galley proof is that in most cases *new blocks* must be made.) Your figure material will be returned to you after publication of the article.
5. Is there a *separate* list of the figure captions? (All figures should have captions.)
6. Is the list of references complete, in accordance with the convention of the journal and are all author's initials given in all references?
7. Is a copy of the manuscript and copies of its figures attached to the original manuscript?

What Industry would be without computers.

Computers?
You as an engineer don't need them as toys. Playing is for kids and Einsteins. But you need them badly as tools.
You want to forget about them as soon as you can. But not sooner. You and your company thrive on them. Or worry about them.
Read Computers in Industry, from cover to cover, 4 times a year and subscribe to it. You need it more than you know. And so does your Industry.

Subatomic Physics

Nuclei and Particles

by L. VALENTIN, *University of Paris VII, France.*

Translated from the French Edition: *"Physique Subatomique, Noyaux et Particules"*

1980 about 650 pages (2 volumes). Price: US $122.00/Dfl. 250.00 (2 vol. set)
Set ISBN 0-444-86117-3

In order to reach readers of various levels and aptitudes, the author has devised a presentation by successive approximations in four distinct parts, reflecting complementary points of view.

In **Part One** the principal ideas of subatomic physics are introduced in a heuristic fashion. **Part Two** presents some contemporary applications of subatomic physics. These two Parts form the first volume and constitute a qualitative approach to the main phenomena in this field.

The second volume begins with **Part Three** in which the author develops, about the atomic nucleus, some topics of general interest in physics. Finally, in **Part Four,** dealing mainly with fundamental particles, conservation laws are stressed by linking them to invariance principles.

The author hopes that the work thus presented will allow the reader to form an initial judgement about nuclear and particle physics, thus enabling him to participate in recent developments in heavy ion physics, high energy physics, nuclear astrophysics, nuclear plants, etc.
